

SUMMARY

Systems Engineer focused on mobile development with Flutter and knowledge of native development with Swift and Kotlin. I build production applications for the fintech, IoT, NFC and digital identity sectors, integrating native iOS and Android SDKs, BLoC architectures and CI/CD pipelines. I lead a mobile team balancing coordination with hands-on execution, ensuring stable releases and designing portable architectures toward native development, with pixel-perfect attention to UI. Active in the mobile community and up to date with the Android and iOS ecosystem, applying multi-agent AI workflows for testing and performance validation (images, video, jank) before every commit.

SKILLS

Communication & Interpersonal	Programming	Additional Tools
Effective Communication (EN C1 - ES) Crisis Management - Punctuality Teamwork - Problem Solving	Flutter, Dart, Kotlin, Swift, C#, .NET, JavaScript, PHP, HTML/CSS, Laravel, BLoC, Provider, SQL	Git, GitHub, GitHub Actions, CI/CD Claude Code, Postman, Linux Enterprise Architect, Trello

- EXPERIENCE
- Datec Corp

Mobile Tech Lead

March 2026 – Present

Santa Cruz, Bolivia | Hybrid | April 2025 – Present

 - Lead the **Flutter** team for [EGX One](#) (fintech super app: delivery, marketplace and EGX Cash wallet) and other concurrent projects, balancing coordination with **hands-on** execution and critical problem-solving.
 - Set code quality standards applying Clean Architecture, coordinating with teams and product owners.
 - Design a portable architecture that enables a smooth transition toward native development when the product requires it.
 - Drive release readiness ensuring stability and alignment with product goals.
- Mobile Developer

April 2025 – February 2026

- Built an **IoT** cashless vending solution in **Kotlin**, implementing secure **SDK** integration, in-app security measures, reliable device-machine communication, and on-device testing.
 - Created a **Flutter** demo of **NFC** wristbands for point transfers and virtual balance activation, integrating backend flows for pre-authorization and validation.
 - Enhanced a **Flutter** virtual payments demo simulating **NFC** and card payments, optimizing UI, **performance** and **Firebase** workflows.
 - Developed the ElGeniox beta app in **Flutter** with **Firebase** and **Sentry** for **observability and error monitoring in production**, with a scalable architecture to enable quick iterations and reliable client demos.

- ValidMe LLC

Mobile Developer

December 2024 – April 2025

Newark, Delaware (Remote)

 - Led full-cycle development of a decentralized **identity verification** app (**KYC, biometrics**) in **Flutter** with **BLoC**, applying **asymmetric cryptography** for secure data handling.
 - Integrated native **iOS** and **Android SDKs**, **Firebase** push notifications, and ran tasks in **Isolates** for **performance** optimization.
 - Designed the **CI/CD** pipeline with **GitHub Actions** for automated deployments to **TestFlight**, **Google Play Console** and **App Store**, monitoring stability with **Crashlytics**.
 - Implemented multi-language support and **Zendesk** customer integration, leveraging AI tools.

- Presto

Mobile Developer

August 2024 – November 2024

Remote

 - Developed onboarding modules for a financial app in **Flutter** with **BLoC**, under **Scrum** methodology.
 - Managed integrations via pull requests with **Gitflow**, ensuring quality deliveries for **Android** and **iOS**.
 - Distributed versions to testing and production environments through **Firebase App Distribution**, **TestFlight**, **Google Play Console** and **App Store**.

- EDUCATION
- Universidad Autónoma Gabriel René Moreno

Systems Engineering

March 2018 – December 2023

Santa Cruz, Bolivia

 - First Place in Software Development, Faculty Science Fair.
- UAGRM School of Engineering

Diploma in DevOps Essentials

June 2024 – November 2024

Santa Cruz, Bolivia

 - CI/CD**, automation, infrastructure as code (IaC) and containers.
